International Services Corporation

Company Profile

In 1990 a group of experienced specialists in Japan decided to establish a firm to help the troubled Petrochemical industries and solve their problems. As a result, our firm International Services Corporation (ISC) was established in Tokyo in 1991, and it was able to obtain a very good reputation among its customers from the very beginning. The next year in 1992 ISC was appointed as the exclusive representative of B.I.P.C. (Bandar Imam Petrochemical Company) formerly known as I.J.P.C. to provide them with services and assistance for reconstruction of their huge complex, which had been suspended for several years due to the damages during the war.

Even after expiration of the five years successful contract, ISC is still regarded by BIPC as a reliable source for the procurement of their required machinery, materials, parts and technical services.

Today ISC is enjoying a very favorable reputation and evaluation from all clients in the oil, gas and petrochemical industries in various countries over the world.

We care about the needs and troubles of our clients and we believe that the only way to keep our old clients with us and to increase their number is to provide them with fast, reliable and affordable services.

You just let us know what your requirements are. From one single pin to a complete plant, and then be the judge of our speed, accuracy, affordability and advantageous services.
